## ***Response to Amendment***

### ***Claim Objections***

The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 11-13 been renumbered 47-49.

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2, 4-10 and 47-49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Friedman ('201). Regarding claims 1-2, 4, 7 and 10, Friedman ('201) discloses the claimed invention except for the LED and the teaching that the lap includes a digital camera. It would have been an obvious engineering design choice to substitute an LED for the light source of Friedman since the LEDs are well

known in the illumination art to substituted for other low voltage light sources because they use less power, are more efficient and last much longer than other conventional light sources. Regarding claims 5-6, the type of power source being used would have merely been obvious design choices to one having ordinary skill in the art. Regarding claims 8-9, The color of the LED or angle of distribution would have merely been obvious design choices to one having ordinary skill in the art. Furthermore, it would have been obvious to one skilled in the art at the time the invention was made to use a digital camera with a laptop computer because the examiner takes official notice that modern laptop computers are now sold with digital cameras.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-10 and 47-49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen in view of Friedman ('201). Regarding claims 1-4, 7, 10 and 47-49, Chen discloses the claimed invention except for the specific teaching that the lamp device is attached to a laptop computer having a digital camera and the light source being an LED. Friedman ('201) teaches that it is advantageous to attach lamp

devices to a laptop display. It would have been obvious to one skilled in the art at the time the invention was made to use the lamp device of Chen on laptop display screens as taught by Friedman ('201) in order to effectively illuminate the screen in darkened conditions. Furthermore, it would have been obvious to one skilled in the art at the time the invention was made to use a digital camera with a laptop computer because the examiner takes official notice that modern laptop computers are now sold with digital cameras. It would have been an obvious engineering design choice to substitute an LED for the light source of Chen since LEDs are well known in the illumination art to substituted for other low voltage light sources because they use less power, are more efficient and last much longer than other conventional light sources. Regarding claims 5-6, the type of power source being used would have merely been obvious design choices to one having ordinary skill in the art. Regarding claims 8-9, the color of the LED or angle of distribution would have merely been obvious design choices to one having ordinary skill in the art.

#### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-10 and 47-49 have been considered but are moot in view of the new ground(s) of rejection.

#### ***Conclusion***

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP §

706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
